Kemlite Wall and Ceiling System

Thank you for copies of USDA approvals, MIRINZ assessment, other related documents, as well as small samples of both the SMOOTH surface version with SURFASEAL and the EMBOSSSED surface version with SURFASEAL.

An assessment has been made with the result being that both the smooth and embossed versions are approved for use as ceiling and wall cladding in export meat premises in Australia.

This approval does not constitute an endorsement of these products. You should also be aware that any damaged panels must be repaired or replaced to the satisfaction of AQIS officers responsible for supervising that particular establishment. Should the panels not stand up to normal wear and tear in practice, then this approval may be withdrawn.

Yours sincerely,

ALBERT COBB
A/g Chief Veterinary Officer
